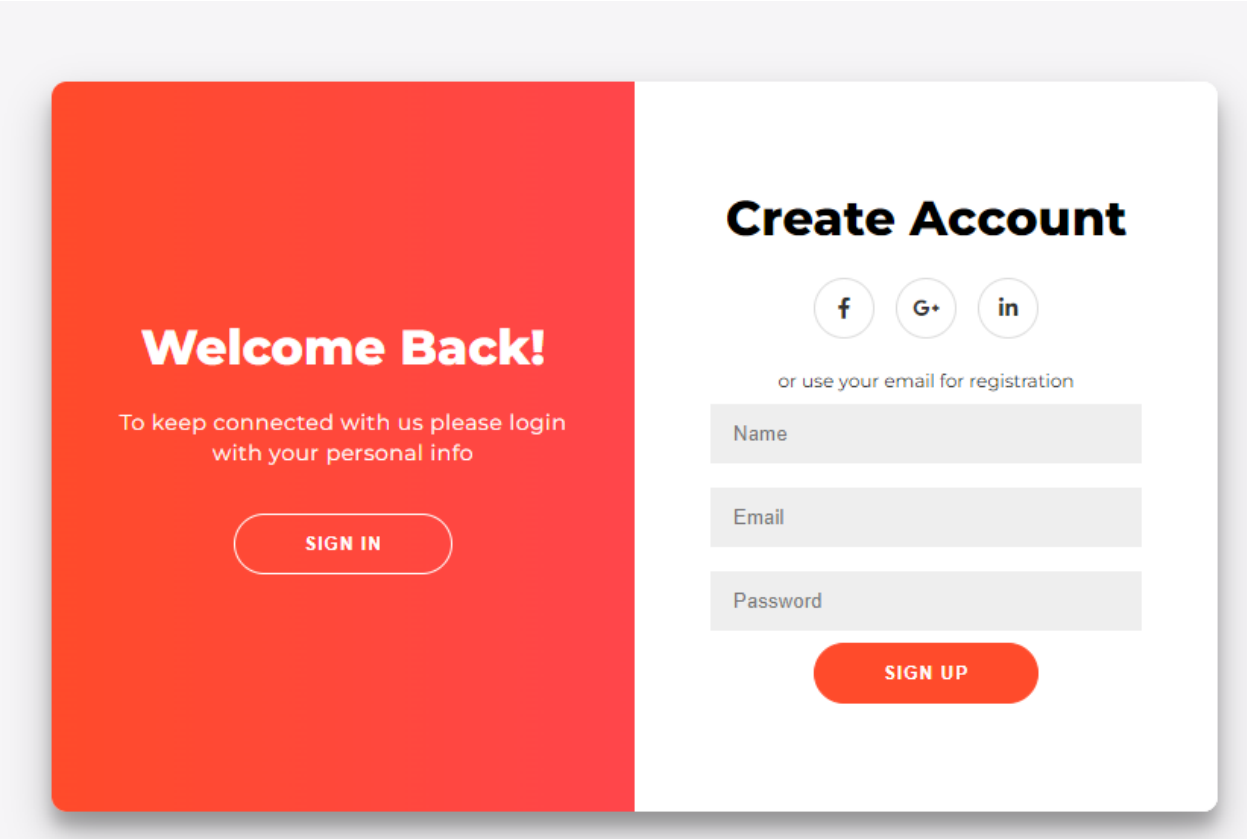
LOGIN and SIGNUP page.

Make some animations to login and sign up

Please use below link for reference.



https://codepen.io/technext/pen/PoprgzP

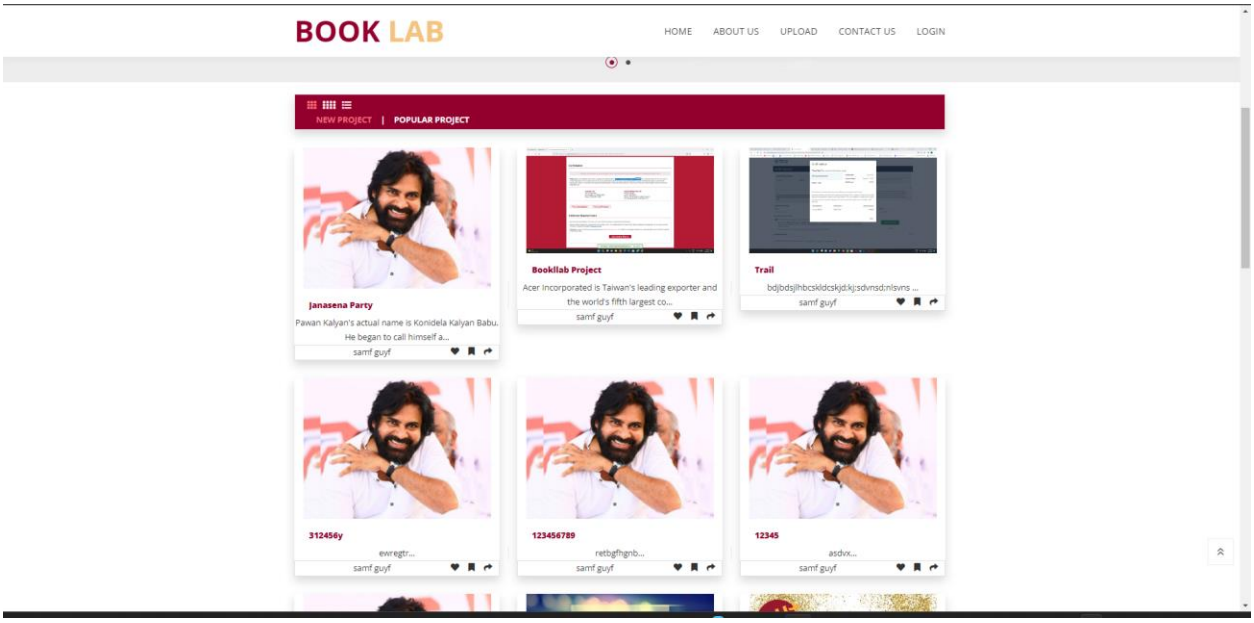
if you like any thing instead of this one you can use.

Make Email verification when sign up is doing by user.

After user login then it should redirect to home page.

If user trying to view project before signup and login, then it ask user to login.

Home page:



Make like share save icon similar to below image.

On Home page try for alignment and good design.

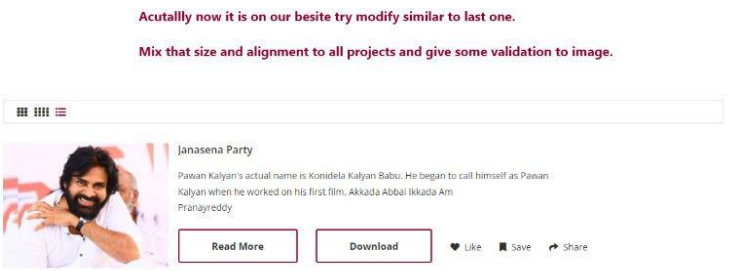
All grids should be in same size.

Increase little bit like, share and save icon because those very small.

If we clicks on that grid then should open its project .

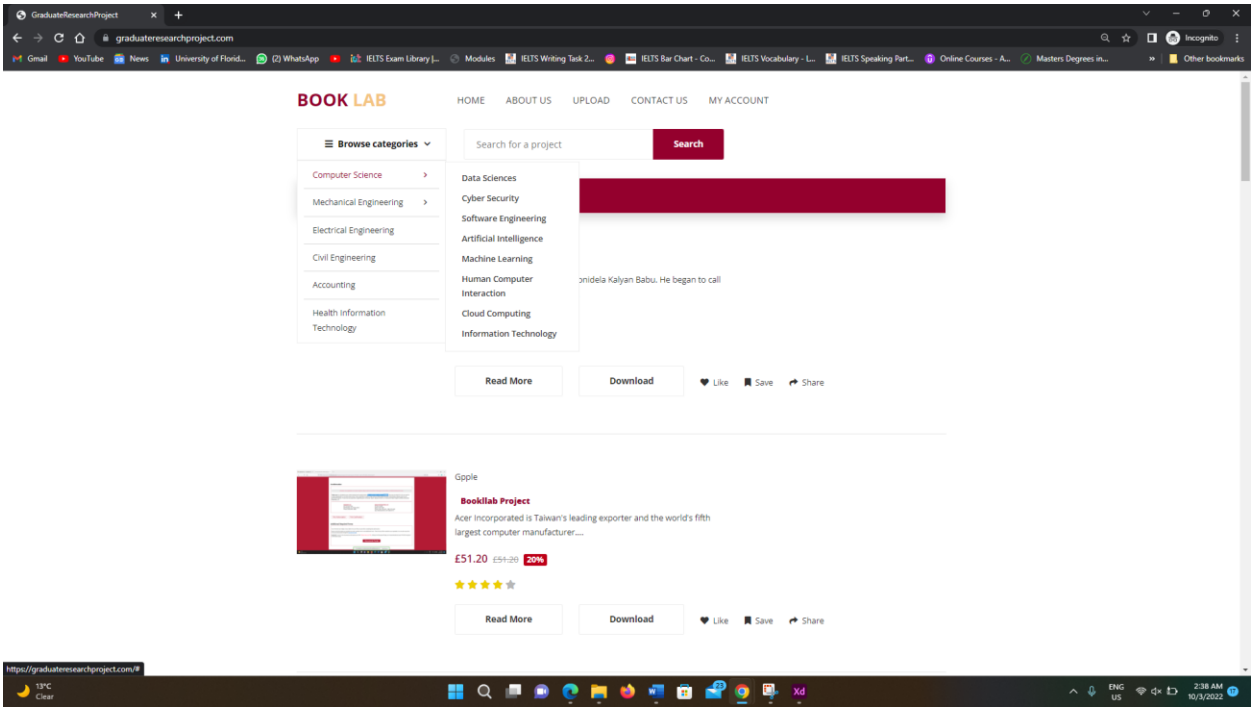
Like, save , share should work .

New project and popular project should work.



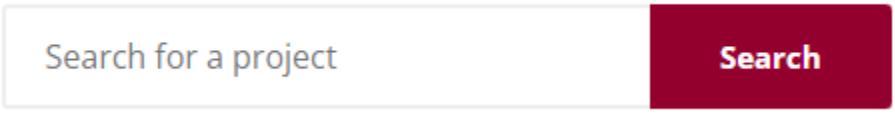
List grid should be like this.

Browse Categories



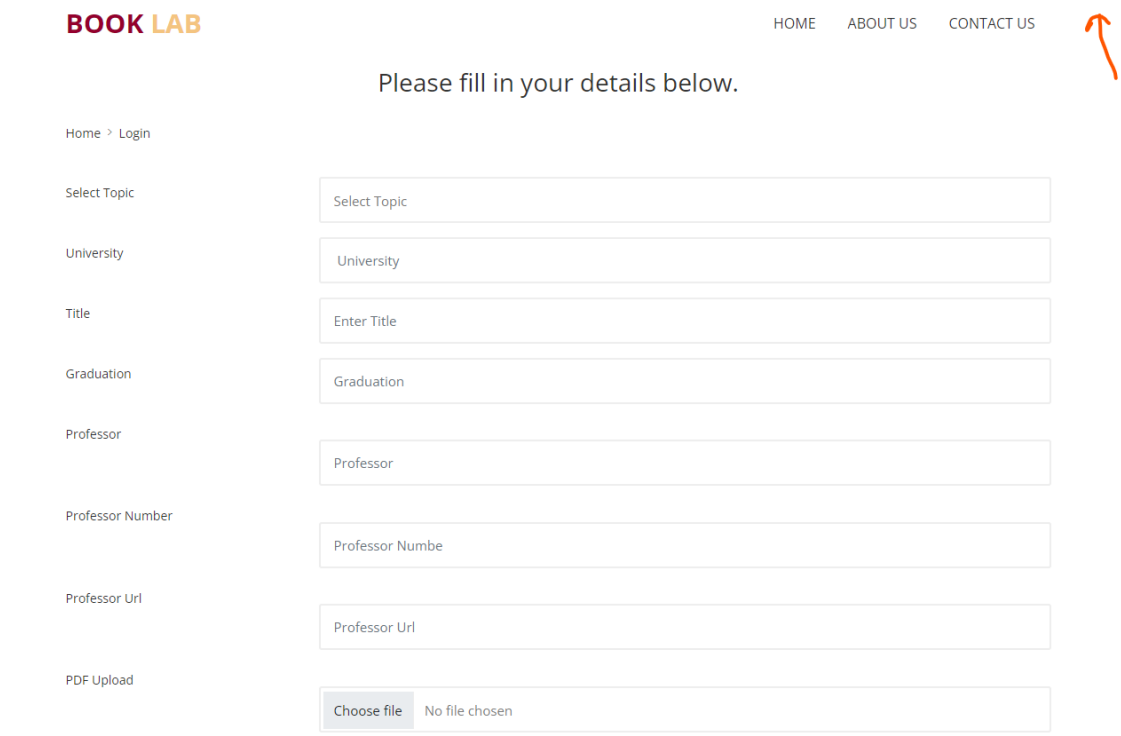
Make individual page for then if I upload project while selecting Data science then it should present in new project and data science page.

Like that all individual page must be done.



Work on search button when we search it shows related content.

Upload page:



Make Heading semi BOLD.

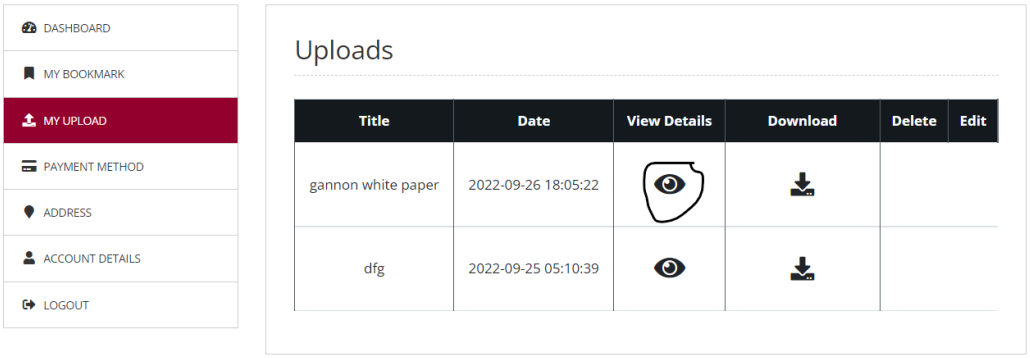
In this page make some good design and make mandatory fields before upload.

When we enter details in each and every option if something went wrong like if we forgot to fill details in any of the box and hit upload then everything is erased in all fields, but it should be saved expect the wrong field entered.

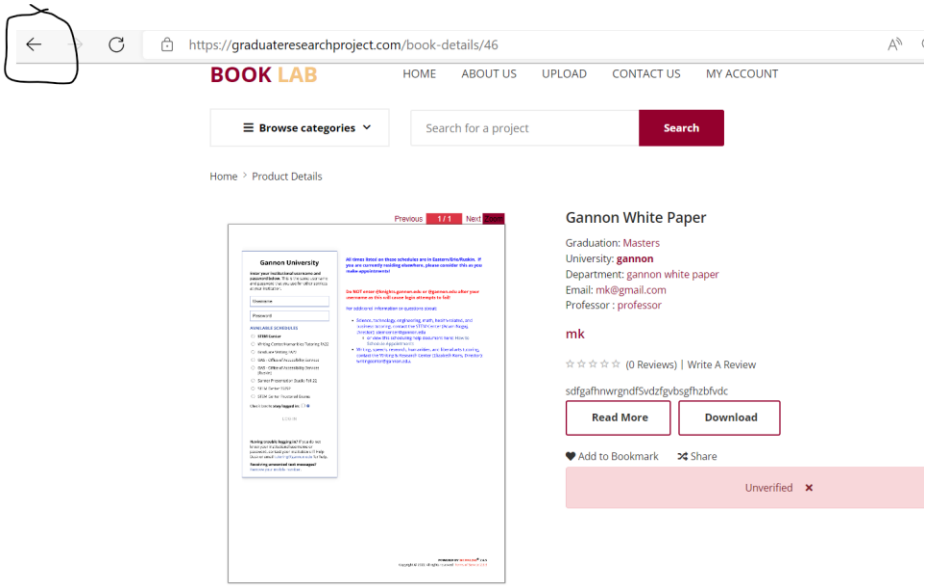
Give some text on pdf upload like upload on pdf

On thumb image accept only jpg or png .

If I click view from my uploads as shown in the below image



It is taking to this page is working correctly

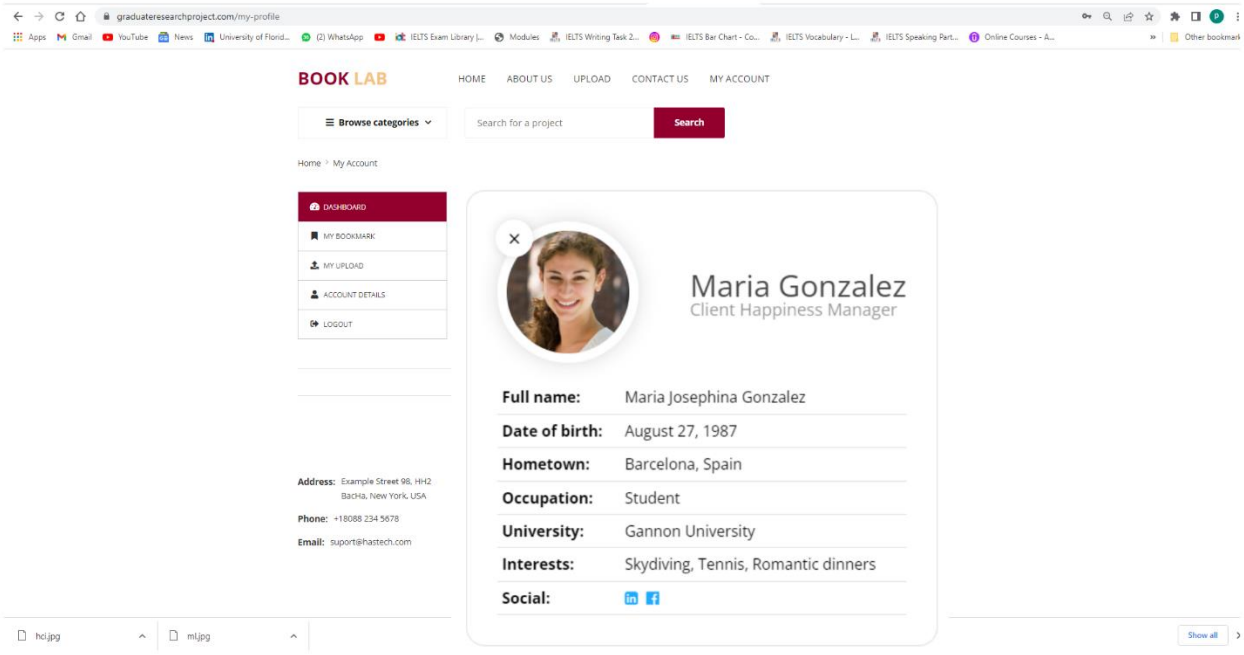


But if I hit the back arrow it should take to my uploads, but it is taking to my account dashboard

As the same if I enter to bookmark and click on the view but if click on back arrow to go back to my bookmark but it is taking to MyAccount Dashboard so for the each and every button in the page.

DashBoaard:(: or User Profile) we can rename if need.

https://codepen.io/jasper/pen/bpLLZe



I am a user I want see your profile how I can see (like public profile)
